

RAPID AGING SYNDROME

Find in the graph below the health symptoms of people who live at different distances from mobile phone antennas.

People who lived closest to the antennas
(within 10 m, red columns)
had the highest incidence of symptoms.

Those furthest away
(beyond 300 m, black columns)
had the lowest incidence.

Similar results have been reported in other countries.

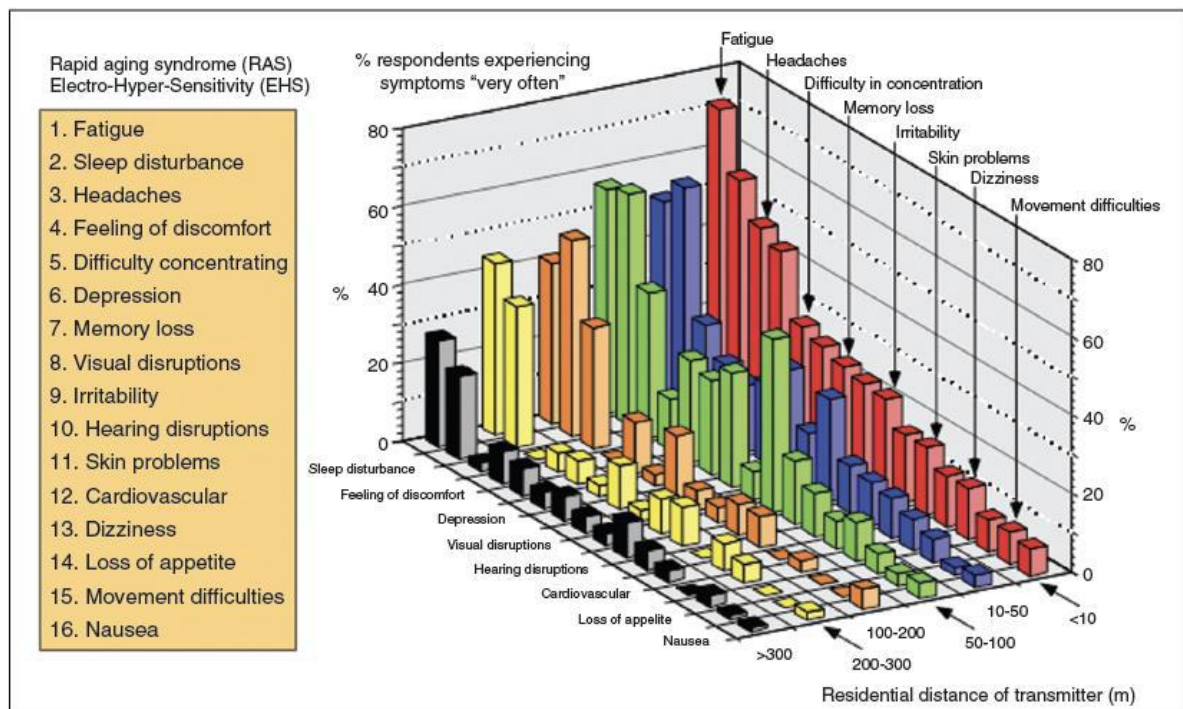

Figure 2. Symptoms experienced by people living near cellular phone base stations. Based on work by Santini et al. 2002, reproduced from Havas 2013.
