

Inherent in All EMF

Transverse component

Readable Field on Meter

Radio waves, Microwaves, 5G

carries the frequency

(eg. Wi-Fi 2.45 GHz)

Bioactive

Longitudinal component

Non-readable field on Meter

Information Field

carries the data/code

(from the artificial chaotic frequencies)

Highly Bioactive

EMF targets the VGCCs

overstimulating and overactivating them

Neurons

our information messengers throughout the brain and body

have the highest concentration of VGCCs,

followed by the pacemaker cells of the heart, then the reproductive organs.

The 2023 Blushield paradigm-shifting study demonstrated that

***Being in a Blushield environment
calmed the overactivation of the VGCCs back to normal levels***

Blushield devices appear to be **feasible, safe, and associated with improvements** in:

**cognitive function, sleep, heart rate variability, blood glucose, immune response,
voltage-gated calcium channel gene normalization**
