

Why Blushield in Your Home is Essential

EMF protection requires a powered 'active' scalar wave technology with the power and strength to override EMF Interference so our brain and body can maintain balance, repair and heal while our modern-day EMF technologies operate

Blushield Technology is a powered 'active' pure scalar wave technology

Simply plug in at home and carry a Blushield Portable when away from your home Blushield '**bluzone**'

"Rather than being victims of our genes, science reveals, that by controlling our environment, we have the power to control our biology and become masters of our fate. ... we are also destined to use technology to ensure our survival." Bruce Lipton PhD

The Artificial Environment We Live in Today

Essential for us to survive, reproduce and thrive, humans and all living organisms evolved due to Nature's cues and life-supporting information fields via scalar waves, the original wireless system that we are primed to respond to.

Electricity, and the recent wireless technologies, introduced powered human-made artificial electromagnetic fields (EMFs) that not only penetrate our brain and body but also permeate our homes, schools, workplaces and hospitals. Being powered, EMFs can drown out our inherent subtle signalling information systems and our connection with Nature's signals. As EMF was introduced at such a rapid pace last century, we have not had time to adapt to this intrusion at such an intimate and fundamental level.

EMF is invisible and involuntary and is emitted from everything electrical, electronic and wireless. The current limits on exposure to EMF, based on the short-term *thermal effects*, such as heating tissue, electrical shock and burns are inadequate and have been obsolete for over fifty years. The power and wireless industries, radiation boards and therefore almost all governments are yet to address and action on the well-documented *non-thermal effects* - the long-term biological effects such as cancer, cardiovascular and neuropsychiatric conditions.

The Different EMFs, the Wrong Model and the Underlying Culprit

EMF is non-ionising radiation (NIR) and within the human-created ELF (extremely low frequency) and RF (radio frequency) electromagnetic spectrum of radio waves, microwaves and millimetre waves there are many different types of EMFs. Like the mistaken thermal effect only stance, the blame has been placed only on the Transverse component from EMF.

However, all electromagnetic fields consist of both Transverse (Hertzian) AND Longitudinal (Scalar) components. EMF meters are only programmed to measure the Transverse component.

The not well understood Longitudinal component of EMF, often termed the 'Information Field', and estimated to be five times stronger in its biological effects, exerts a greater influence on neurological and physiological systems as it carries the incoherent information/data/code from the chaotic transverse frequencies that the brain and body perceive, respond, and react to.

It's All About Information

With 29 experts involved, the *BioInitiative Report 2012 - Summary for the Public* states: *"It appears it is the INFORMATION conveyed by electromagnetic radiation (rather than heat) that causes biological changes and some of these biological changes may lead to loss of wellbeing, disease and even death."*

Information

The difference between health and ill-health is the information/code your brain and body are operating on. As associate professor Dr Martin Blank stated: *"If you break the chain, you break the code. The code must remain intact."*

Frequency

We are constantly being bathed in a sea of artificial electromagnetic radiation. Dr Ross Adey commented that cells 'whisper' to each other in the radio frequency range. For example, Wi-Fi, wireless baby monitors and microwave ovens operate at 2.45 GHz. Scalar physicist Konstantin Mehl states 2.45 GHz is an important biological frequency window that Nature uses in cell communication and questions the use of the 2.45 GHz frequency. The closer a powered artificial signal matches the tiny power levels at which our cells communicate, the more interference it can cause with bodily functions.

5G

EMF is 'Information Interference'. All wireless devices put out polarized EMFs that carry information pulsations. Both the pulsations and the polarization make these EMFs much more biologically active. With 5G, it is possible to carry much more information via much more pulsation.

Pall, a recipient of the Global Discovery Award in 2013 due to his validation of the mechanism of action states the various findings on EMFs and Alzheimer's disease, the increasingly early onset of dementias and the occurrence of digital dementias, all suggest we have another very high-level threat.

Along with a decline in health status amplifying EMF effects, EMF exposure is cumulative, and with substantial evidence that it is often irreversible, there is no downtime to rebalance, repair and heal the body from this information interference.

EMF shielding such as EMF clothing, paints, canopies over beds, curtains, and even a Faraday Cage are unable to adequately protect from EMF, as the powered 'information field' penetrates these 'passive' products. Blushield technology can mitigate against the effects from the Transverse and Longitudinal components that are inherent in all EMF.
